Aim: To Demonstrate the use of GitHub and WebStorm.

Steps/Screenshots:

1. Installation of Webstorm on PC.

2. Creating Remote Repository on GitHub for the Course.

Owner * Repository name *

Aqdisc / WebDevCourse ✓

Great repository name! WebDevCourse is available. Need inspiration? How about [literate-octo-rotary-phone](#)?

Description (optional)

Public Anyone on the internet can see this repository. You choose who can commit.

Private You choose who can see and commit to this repository.

Initialize this repository with:

Skip this step if you're importing an existing repository.

Add a README file This is where you can write a long description for your project. [Learn more](#).

Add .gitignore Choose which files not to track from a list of templates. [Learn more](#).

Choose a license A license tells others what they can and can't do with your code. [Learn more](#).

This will set `main` as the default branch. Change the default name in your [settings](#).

Create repository

3. Cloning Remote Repository To PC

4. Creating Html File in local repository and committing and pushing it

5. Creating a branch to make changes in local repository and syncing to main repository.

6. Creating a pull request to show changes made in the changes branch, issue is updated HTML File.

The screenshot shows a GitHub pull request page for repository Aqdusc/WebDevCourse. The pull request is titled "Updated HTML file #1" and is marked as "Open". It shows one commit from the "changes" branch to the "main" branch. The commit message is "Added a new line to the HTML file". The pull request has 1 review, 0 checks, and 1 file changed. The right sidebar displays review settings, assignees, labels, projects, milestones, and linked issues. A note at the bottom says "Add more commits by pushing to the changes branch on Aqdusc/WebDevCourse".

7. Merging the pull request as only change in html file by adding one line.

The screenshot shows the same GitHub pull request page after merging. The commit message now includes "Merge pull request #1 from Aqdusc/changes". The right sidebar shows the merge status and other repository details. A comment box is visible at the bottom left, and a notifications section at the bottom right indicates "1 participant".

8. Merging the two branches main and changes into main branch

9. Synced all the changes between the local and remote repository/Also added the documentation.pdf file.

10. Forking an existing repository from github.

Releases

1 tags Create a new release

The screenshot shows a GitHub repository page for 'AdaBins'. The repository is public and has been forked from 'shariqfarooq123/AdaBins'. The 'Code' tab is selected. A message at the top states 'This branch is up to date with shariqfarooq123/main.' Below this, a list of files and their commits is displayed. On the right side, there are sections for 'About' (with a description of 'Official implementation of AdaBins: Depth Estimation using adaptive bins') and 'Releases' (with a note about 1 tag). The 'About' section also lists repository details like Readme, GPL-3.0 License, 0 stars, 0 watching, and 99 forks.
